Emirates Steel Careers is Hiring the following Staff- Engineer- Reliability Jobs in Abu Dhabi at Emirates Steel Careers

About Emirates Steel

Emirates Steel is a leading integrated steel manufacturer in the Middle East region, based in the UAE capital, Abu Dhabi and owned by ADQ. Established in 1998, the company boasts a production capacity of 3.5 million tonnes per annum (MTPA) and exports its products to more than 40 countries worldwide.

Job Description

The Reliability engineer is accountable for driving asset reliability performance and maintain high reliability for plant and associated equipment. The reliability engineer aims to provide continuous improvement and understanding of the performance of plant assets through all phases of the equipment life cycle. The role will be responsible for the development of cost-effective asset strategies across the plant assets

Job Responsibilities

Ensuring capture and analysis of maintenance data and equipment work histories to provide recommendations

Reviewing and analyzing data from the operator routes

Leading Root Cause Failure Analysis efforts for incidents triggered by documented procedures or at the request of Production Maintenance Coordinators

Leading disciplined and systematic equipment maintenance strategy development efforts

Leading the monthly review of equipment “bad actors” creating action plans for increasing reliability and monitoring performance vs. plans

Identifying operational and maintenance changes that will provide the solution to specific process unit problems

Actively participating in the capital projects process including providing reliability input

Work with maintenance teams to increase the operating availability and performance against reference rate of asset.

Facilitate Root Cause Analysis, determine root cause of equipment failure, and put in place actions to prevent reoccurrence.

Job Requirements

Bachelor in Engineering

5 years Mechanical/Electrical maintenance experience in integrated steel plant or equivalent industry

Strong mechanical and electrical knowledge and aptitude

Strong knowledge of preventive maintenance programs and the tools associated with failure detection (i.e. vibration analysis, oil monitoring, thermography) as well as the software associated with them

Advanced computer skills with emphasis on condition monitoring software

Knowledge of tools and techniques related to reliability-centered maintenance

Understands how to drive performance improvement across working groups to achieve high performance
