Engineering Lead Jobs In Ajman | Resolve To Save Lives

About the job

Resolve to Save Lives (RTSL) is a global health not-for-profit organization with a mission to prevent 100 million deaths from heart disease and to make the world safer from infectious disease epidemics. Since September 2017, Resolve to Save Lives has partnered closely with low- and middle-income country governments, the World Health Organization, academic, other civil society partners and communities to build capacity for and implement a core package of interventions to reduce cardiovascular disease, the world's leading cause of death. To find out more about our work at Resolve Cardiovascular Health.

Requirement

Our team provides software to support public health programs that aim to prevent cardiovascular disease. We developed Simple (simple.org), a free, open source app used by healthcare workers to better manage patients with high blood pressure, a major cause of cardiovascular disease. By allowing doctors to track patient care over time, we can help them control blood pressure and prevent heart attacks and strokes. Today, Simple is used by thousands of nurses and doctors every day, treating over 1.5 million patients across Asia and Africa, with all data owned exclusively by the countries themselves.
