Company: Silal

Location: , , United Arab Emirates

Category: other-general

Job Purpose

Silal's mandate is to increase the high quality of food produced locally to ensure that the UAE population has access to safe, sufficient, and nutritious food. To achieve this goal and support farmers and growers in increasing productivity and producing quality, Silal offers farmers technical advice to improve practices and technological solutions to address the industry's challenges. The strategic vision is to:

- Create an enabling ecosystem for research, development, and innovation in Agritech
- Develop commercially viable and technically robust solutions to enable domestic production
- Enhance the capacity and capability of farmers and advisors with both world-class knowledge and technologies.

As part of this vision, Silal is building state-of-the-art Research and Development Center in Al Foah Farm, Al Ain. The R&D Center aims to be a hub for Agriculture research and practical demonstration of advanced science and technologies to improve the advice and the knowledge of farming in the UAE.

The broad purpose of this role is to carry out both routine and one-off sampling and laboratory testing and perform a variety of technical support functions across the organization.

In the daily work, the employee interacts with the laboratory manager and colleagues, internal departments such as manufacturing, procurement and quality, external suppliers, and

customers such as farm managers, agronomists, service engineers, delivery drivers, regulatory bodies, and inspection teams.

The employee will be responsible for proactively finding solutions to problems and identifying areas for improving the business. As a laboratory technician the employee is expected to work both individually and as part of the wider Silal laboratory team. They can work with minimum supervision, taking responsibility for the quality and accuracy of their own work. In any context working safely and ethically is paramount and the employee will be required follow quality procedures to meet the requirements of quality standards relevant to the role.

Key Responsibilities

The Mobile Disease Detection Unit Technician will oversee processes from sampling collection and reception of samples through to delivery of final reports to customers. The job will entail carrying out plant pathological diagnostic methods on samples received (e.g. using a range of microscopic and cultural techniques such as incubation and isolation in addition to making preparations for microscopic examination) using standard operating procedures and direction from senior colleagues. And will be responsible for ensuring samples are processed efficiently and effectively between disciplines, customers are informed of status of their samples, and final reports are delivered to appropriate deadlines. Specifically, you will:

Be responsible for the day to day running of Mobile Disease Detection Unit activities,
Contribute to the delivery of experimental work.

Communicate with the Silal Project Manager and Science Leadership to identify their requirements and agree prioritization and planning work in relation to delivery targets

Perform daily equipment checks

Cleaning equipment and general laboratory housekeeping

Ensure that the Mobile Disease Detection Unit is maintained to Silal's health and safety and operational polices.

Ensure best practice in the laboratory, following Standard Operating Procedures and conducting work to the quality systems in place

Technical Duties

Work safely in the mobile laboratory and main laboratory, maintaining excellent housekeeping

whilst following appropriate safety, environment and risk management systems.

Follow quality procedures to meet the requirements of quality standards relevant to the workplace.

Prepare for laboratory tasks using the appropriate scientific techniques, procedures and methods

Perform laboratory tasks following specified methodologies, such as Standard Operating Procedures.

Use of specified instrumentation and laboratory equipment, including calibration where required.

Produce reliable, accurate data and keep accurate records of laboratory work undertaken and results.

Collect, analyze, interpret and evaluate data and identify results requiring further investigation seeking advice of senior colleagues as appropriate.

Communicate scientific information appropriately, including the use of Laboratory Information Management systems, either digital or paper based.

Apply scientific techniques for data presentation. e.g. statistics

Recognize problems and apply appropriate scientific methods to identify causes and achieve solutions.

Participate in continuous business performance improvement.
