Ref code: CR\_2311-100\_Material Engineer

Job summary

**MISSION:**

Responsible for ensuring the integrity and performance of materials, playing a crucial role in material selection, procurement, and compliance with international standards.

**TASKS:**

Collaborating with project teams to select appropriate materials for subsea applications, considering factors such as corrosion resistance, strength, and compatibility with project specifications;

Applying specialized knowledge in subsea projects engineering, contributing to the design, fabrication, and installation of subsea components with a focus on pipes and related materials;

Demonstrating proficiency in Corrosion Resistant Alloys (CRA) materials, including HRB, MLP, WOL processes;

Ensuring all materials and components meet relevant international standards, including API

5L, API 5LD, and DNV-F-101, to guarantee quality and safety in subsea applications;  
Leading and overseeing the procurement process for line pipes and other subsea components, including bends, fittings, and forged pieces, to ensure adherence to project requirements and specifications;

Coordinating material testing and inspection activities, working closely with quality assurance teams to verify compliance with project standards and specifications.

#### EDUCATION & EXPERIENCE:

Bachelor's degree in Engineering, or a related field;

10+ years of experience as a Material Engineer in the Oil & Gas sector, with a specific focus on subsea/offshore projects and materials selection;

Strong understanding of the procurement process for line pipes and subsea components;

Previous experience during EPC projects with ADNOC standards.

#### OTHER DETAILS:

Job Location: Abu Dhabi, UAE;

Contract Duration: Long-term;

Working schedule: 9 hours x 5 days;

Starting date: December 2023.

Profile Middle East upholds workplace equality and diversity, assessing candidates solely on merit and potential.
