Description:

My Client is a data company that creates products to address global blockchain data issues. They are an API-first product company that is committed to using accurate, on-chain data to power and solve blockchain data problems, delivering real-time data from over 40 blockchains and various Web3 protocols.

Responsibilities:

Designing the protocol and its underlying cryptography

Modelling the behaviour of the network

Analyzing potential threats and how the system will behave under various conditions

Creating a reference implementation of the protocol (presumably on Golang and Javascript)

Testing and deploying the first network using the protocol, and combining expertise in computer science, analytics, and coding.

Requirements:

Distributed and decentralized (blockchain/DAGs) system design and implementation

Peer-to-Peer (P2P) protocols implementation, such as BitTorrent, Kademia, Tor, IPFS

Protocol modelling and analysis, like Byzantine Fault Stability

Implementation of algorithms working in scaled environments, cloud, or decentralized
