## Software Engineering Lead

[Apply Now](#)

Company: Datahash

Location: united arab emirates

Category: other-general

Enablers of no-code, first-party data integrations, Datahash is a global partner of various Ad Platforms such as Meta, Snapchat, Google, TikTok and X (previously Twitter). Be it performance marketing optimization (safeguarding ROAS, lowering CPA) or generating higher quality leads (reducing CPQL), Datahash does it all in just a couple of clicks. Marketers can now optimize, personalise, target and retarget across customer touchpoints like web, app, E-commerce, and CRM platforms in under 15mins!

**Job Description:**As a Software Architect specializing in data integrations, you will play a crucial role in designing, developing, and implementing robust and scalable solutions for integrating data across various systems and platforms. Your expertise in data integration technologies, software architecture, and system integration will be essential to ensure efficient and seamless data flow within complex software ecosystems.

**Responsibilities:**Collaborate with stakeholders to understand business requirements and design data integration solutions that align with the overall software architecture. Identify appropriate data integration patterns, technologies, and tools to meet the project goals. Define the system architecture and data integration strategy based on scalability, performance, reliability, and security requirements. Create architectural diagrams, system blueprints, and technical specifications to guide the development team. Research and evaluate newer technologies, frameworks, and platforms to identify the most suitable tools for the project. Stay up to date with emerging trends and best practices in data integration and propose innovative solutions. Lead and contribute to the software implementations by working closely with development teams. Provide technical guidance and ensure adherence to architectural standards, coding conventions, and best practices.

Collaborate with data engineers, developers, and other stakeholders to resolve technical challenges. Ensure data privacy, security, and compliance standards are met. Implement encryption, authentication, and authorization mechanisms as required. Develop and execute comprehensive testing strategies. Collaborate with quality assurance teams to define test cases, perform integration testing, and resolve any defects or issues identified.

Requirements Should have 8+ years of working experience. Bachelor's or master's degree in computer science, software engineering, or a related field. Proven experience as a software architect/lead, with a focus on AWS and building data integrations and third party integrations. Strong knowledge of data integration patterns, techniques, and technologies such as ETL/ELT, message queues, APIs, data virtualization, and data synchronization. Proficiency in programming languages like Java, Python (with more focus on Python). Solid understanding of AWS services and architecture, including but not limited to Lambda, S3, DynamoDB, SQS, SNS, Kinesis, IAM, and CloudWatch. Understanding of Serverless and Micro-Services architectural patterns with strong understanding of container-based technologies like Kubernetes, etc. Excellent problem-solving and analytical skills. Strong communication and collaboration abilities to work effectively with cross-functional teams. Familiarity with agile software development methodologies.

1. Work From Anywhere: Your office can be anywhere you like. Seriously, anywhere.
2. Your Hours, Your Call: Work early bird hours or burn the midnight oil. It's all good.
3. Get in on the Action: ESOP? Yeah, you get a piece of the pie too.
4. Health is Wealth: We've got you and your family covered, health-wise.
5. Cool Vibes Only: Our work culture is as awesome as your favorite hangout spot.
6. Epic Offsites: Once a year, we go all out. Think fun, sun, and maybe a cocktail or two.
7. Coworking Access: Need a change from your home office? We've got spots.
