

## Unity Developer

[Apply Now](#)

Company: Calyptus

Location: dubai

Category: other-general

- Selecting and integrating assets to render environments designed by our 3D architects.
  - Writing Unity (and to some extent Unreal Engine) code to run those virtual environments, on Linux unless the project requires some other OS (we try to avoid supporting more than one development OS).
  - Helping to architect and code our metaverse backend - the code that maintains the state of our environments, identifies users, and executes transactions.
  - Assist other teams in the organization to integrate metaverse products into our overall offering.
  - Whilst this is an individual contributor role, an ability to mentor and manage others and improve the skills of the organization generally would be an advantage.
- Responsibilities
- A good degree in a numerate subject (preferably computer science).
  - Good ability in game development in Unity (or another engine with evidence that the skills will transfer) - in particular, WebGL/AR experience would be of benefit.
  - A good knowledge of computer science and ability to read and understand code quickly.
  - Good knowledge of a variety of programming languages and systems, including the ability to learn rapidly.
  - A willingness to at least learn how to write smart contracts and interact with, if not implement, blockchains.
  - Good proficiency with Linux.
  - Working knowledge of GCP and Kubernetes is an advantage.
